

INTEGRATED HEALTH SCIENCES

Iowa State University, a leader in interdisciplinary education, offers the Integrated Health Sciences (IHS) major, to provide undergraduate students with comprehensive knowledge and skills from multiple disciplines that engage critical issues in the healthcare sector. With contributions from a dozen departments across the Colleges of Liberal Arts and Sciences, Agriculture and Life Sciences, and Health and Human Sciences, the IHS major uniquely prepares students for careers addressing modern healthcare challenges at individual, community, and systemic levels.

What is Integrated Health Sciences?

Integrated Health Sciences (IHS) refers to a multidisciplinary approach to understanding and improving health outcomes by blending knowledge from diverse fields such as biological, behavioral, and data sciences. The IHS major at Iowa State University is designed to equip students with a comprehensive understanding of how these disciplines intersect with public policy, ethics, and communication to address modern healthcare challenges.

Through this interdisciplinary approach, the IHS major provides students with a broad yet flexible education, preparing them for diverse career opportunities in healthcare. By integrating both theoretical knowledge and practical experience, the program ensures that graduates are well-equipped to navigate the complexities of modern healthcare systems and make impactful contributions at individual, community, and systemic levels.

The Integrated Health Sciences major combines the strengths of biological, behavioral, nutrition and data sciences, integrated with a strong foundation in public policy, ethics, and communication. This interdisciplinary approach ensures that students receive a rich educational experience that is both broad and flexible, accommodating a wide variety of career aspirations in healthcare, public health, policy, and beyond.

Graduates of the IHS major at Iowa State University will leave with the tools necessary to become leaders in healthcare, equipped to effectively communicate, innovate, and contribute to the betterment of health systems and policies worldwide.

Integrated Health Sciences Program Focus Areas

In addition to declaring the major in Integrated Health Sciences, students will choose a program focus. The five program focuses are Science of Health and Disease, Human Health and Nutrition, Data Science and Health Studies, Public Policy, Ethics, Communications, and Human

Health, and Behavioral and Mental Health Studies. Elective options for each focus area can be found in Integrated Health Sciences website (<https://integratedhealthsciences.iastate.edu/>) under academics.

Program Focus in Science of Health and Disease

This choice emphasizes the biological and molecular mechanisms that underlie health and disease. Students will explore genetics, cellular biology, and the role of environmental factors in health outcomes, preparing them for careers in medical research, diagnostics, and biotechnology. With a focus on understanding how diseases develop and progress, students gain the foundation necessary for advancing into healthcare professions such as medicine or research-based graduate programs. Laboratory work and research experiences in areas such as gene therapies and disease prevention provide hands-on learning that complements rigorous academic coursework.

Program Focus in Human Health and Nutrition

In this program focus, students examine the complex relationships between diet and exercise on human biology and overall health. Focused on the role of diet and physical activity in promoting health and preventing disease, this program focus is ideal for students pursuing advanced healthcare professional degrees and careers in medicine, public health, clinical research coordinators, nutrition, and wellness. Courses cover a wide range of topics, including personalized medicine, metabolism, nutritional biochemistry, and the impact of dietary habits and physical activity on public health. Practical experiences in laboratory work, clinical and community settings prepare students for the dynamic challenges of health careers.

Program Focus in Data Science and Health Studies

Students with this focus will develop expertise in analyzing and interpreting large datasets related to health outcomes, such as electronic health records and clinical trials. With training in bioinformatics, statistics, and computational methods, students will be equipped to drive innovations in personalized medicine, public health initiatives, and healthcare technology. Careers in health data analysis, epidemiology, and bioinformatics are just a few of the many paths open to these graduates.

Program Focus in Public Policy, Ethics, Communications, and Human Health

This program focus is designed for students interested in the intersection of healthcare, society, and policy. Combining social sciences and humanities, this program focus prepares students to understand and influence public health policies, communicate effectively about health issues, and address ethical challenges in healthcare. Graduates will be equipped to pursue careers in healthcare administration, public health policy analysis, healthcare consulting, and health communications. Coursework emphasizes how healthcare decisions impact society, from policy formulation to equitable access to care.

Program Focus in Behavioral and Mental Health Studies

Behavioral health is a critical component of overall wellness. This program focus provides students with an understanding of the psychological, emotional, and social factors that influence health. Courses cover topics such as mental health disorders, behavioral interventions, and the impact of stress on physical health. With a strong emphasis on understanding health disparities and community-based interventions, students are prepared for careers in mental health, social services, and psychiatric services. The program focus also explores the complex ways that mental health and physical health intersect, emphasizing holistic approaches to care.

Senior Year Capstone Experience

All students graduating with a degree in Integrated Health Sciences will take IHS 4010 (3 Cr.) where they will carry out a capstone project that synthesizes their interdisciplinary learning. The capstone provides an opportunity to apply knowledge from their chosen program focus to a current healthcare challenge, often in collaboration with ISU faculty, local healthcare organizations, or research institutions. This experience is a crucial step in preparing students for post-graduate success, whether in the workforce or in advanced degree programs.

Program Learning Outcomes

The Integrated Health Sciences major is designed to equip students with the diverse skill sets required to navigate and succeed in the rapidly evolving healthcare landscape. These competencies reflect the interdisciplinary approach of the program and are essential for addressing modern healthcare challenges with innovation, integrity, and inclusivity.

Graduates of the IHS major will achieve the following competencies:

- **Critical Thinking** – Analyze complex health issues using interdisciplinary approaches to create evidence-based solutions. Apply problem-solving skills across biological, behavioral, and social science domains to address healthcare challenges at individual, community, and systemic levels.
- **Scientific Literacy** – Use scientific methodology to design, conduct, and interpret health-related research. Graduates will be proficient in evaluating and applying scientific evidence in healthcare decision-making and public health initiatives.
- **Communication** – Effectively communicate scientific and health-related information to diverse audiences, including healthcare professionals, policymakers, and the general public. Utilize various media formats to convey complex concepts clearly and accurately.
- **Cultural Competence** – Advocate for health equity by recognizing and addressing health disparities. Develop a deep understanding of the

social, economic, and cultural factors that influence health outcomes across different populations.

- **Ethical Decision-Making** – Apply ethical principles in healthcare practice and policy development. Demonstrate accountability and integrity in clinical, research, and public health settings while navigating ethical dilemmas in healthcare.

Integrated Health Sciences Requirements

The Integrated Health Sciences major at Iowa State University offers undergraduate students a unique and flexible academic pathway, allowing them to explore multiple facets of healthcare and tailor their studies to fit their career goals. In addition to a common set of core requirements, each student will complete the required coursework for their program focus area, and complete 9 credits of supporting coursework selected from one or more of the other focus areas described below.

In addition, students in the Integrated Health Sciences major, must meet University-wide requirements for graduation and the general education requirements of this program. Students must earn a minimum of 36 credits in courses numbered 3000 or above and have a 2.0 average GPA in courses that apply to the major.

Total Credits Required: 120 cr.

Only 65 cr. from a two-year institution may apply which may include up to 16 technical cr.; 9 P-NP cr. of free electives; 2.00 minimum GPA.

University and General Education Requirements

- **International Perspectives:** 3 cr. (note that this requirement can be met with courses used to meet other requirements)
- **U.S. Cultures and Communities:** 3 cr. (note that this requirement can be met with courses used to meet other requirements)
- **Communication Proficiency/Library Requirement**

ENGL 1500	Critical Thinking and Communication	3
ENGL 2500	Written, Oral, Visual, and Electronic Composition	3
LIB 1600	Introduction to College Level Research	1
Advanced Communication Requirement*		3
Total Credits		10

*IHS Students meet this requirement by taking COMST 4120 Health Communication.

General Education

Students can meet the breadth requirements of the General Education Program through the required and selected coursework in this interdisciplinary major. By the end of their course of study, students are

expected to have met the following minimum requirements across these general education areas.

- Humanities 6 cr
- Social Sciences 6 cr
- Math and Statistics 6 cr
- Natural Sciences 7 cr.

IHS Core Requirements (min. 33 Credits)

IHS 1010	Introduction to Integrated Health Sciences	2
LAS 1010	Orientation	1
BIOL 2550	Fundamentals of Human Anatomy	3
BIOL 2550L	Fundamentals of Human Anatomy Laboratory	1
LAS 2030	Professional Career Preparation	1
POLS 3370	Health Politics and Policy	3
PHIL 3310	Moral Problems in Medicine	3
BIOL 2560	Fundamentals of Human Physiology	3
BIOL 2560L	Fundamentals of Human Physiology Laboratory	1
FSHN 1670	Introductory Human Nutrition and Health	3
Choose from one of the following:		3-4
STAT 1010	Principles of Statistics	
STAT 1040	Introduction to Statistics	
STAT 2010	Introduction to Statistical Concepts and Methods	
Choose from one of the following:		3
PSYCH 1010	Introduction to Psychology	
SOC 1340	Introduction to Sociology	
COMST 4120	Health Communication	3
IHS 4010: Capstone		3
Total Credits		33-34

Program Focus and Supporting Coursework (31 to 41 credits)

In addition to the core requirements, each Integrated Health Sciences major will complete the requirements of one of the five program focus areas detailed below.

Choosing a Program Focus

Students are expected to choose a program focus that aligns with their career aspirations by the end of their first year of study. Each program focus includes a combination of designated courses and courses selected from a list of options, allowing students to tailor their education to their individual interests. Along with classroom learning, students should seek out the practical experiences such as laboratory work, internships, job shadowing and research opportunities, that give students

the skills necessary to apply their knowledge in real-world healthcare settings.

Program Focus in Science of Health and Disease

A minimum of 23 credits are required for this specialization (table, below), including a year-long sequence of general biology lecture and lab. In addition to the 23 required credits, students must complete 9 credits from the program focus choice list for Science of Health and Disease, and 9 credits of interdisciplinary supporting coursework from the other program focus areas. See the IHS website for a lists of courses for each program focus.

Required Courses

BIOL 2110	Principles of Biology I	3
BIOL 2110L	Principles of Biology Laboratory I	1
BIOL 2120	Principles of Biology II	3
BIOL 2120L	Principles of Biology Laboratory II	1
BIOL 3130	Principles of Genetics	3
BIOL 3130L	Genetics Laboratory	1
Choose 1 Chemistry Group:		5-10

CHEM 1630 College Chemistry

CHEM 1630L Laboratory in College Chemistry

Or

CHEM 1770 General Chemistry I

CHEM 1770L Laboratory in General Chemistry I

CHEM 1780 General Chemistry II

CHEM 1780L Laboratory in College Chemistry II

Choose 1 Biochemistry Option: 3

BBMB 2210 Structure and Reactions in Biochemical Processes

BBMB 3030 General Biochemistry

BBMB 3160 Principles of Biochemistry

Choose 1 Advanced A&P Option: 3-4

BIOL 3500 Comprehensive Human Anatomy

BIOL 3350 Principles of Human and Other Animal Physiology

BMS 3290 Anatomy and Physiology of Domestic Animals

BMS 4480 Principles of Human Gross Anatomy

9 credits from approved program focus choice list 9

Interdisciplinary IHS Supporting Coursework* 9

Total Credits 41-47

*9 credits from approved lists for other program focus areas.

Program Focus in Human Health and Nutrition

In addition to the 20 credits required for this specialization, students must complete 6 credits from the program focus choice list for Human

Health and Nutrition, and 9 credits of interdisciplinary supporting coursework from the other program focus areas. See the IHS website for a lists of courses for each program focus.

Required Courses

FSHN 2650	Metabolism, Nutrition and Health	3
FSHN 4670	Molecular Basis of Nutrition in Disease Etiology and Health Promotion	3
3 credits of designated FSHN course		3
KIN 3580	Exercise Physiology	3
Choose 1 Chemistry Group:		5
CHEM 1630	College Chemistry	
CHEM 1630L	Laboratory in College Chemistry	
Or		
CHEM 1770	General Chemistry I	
CHEM 1770L	Laboratory in General Chemistry I	
Choose 1 Biochemistry:		3
BBMB 2210	Structure and Reactions in Biochemical Processes	
BBMB 3030	General Biochemistry	
BBMB 3160	Principles of Biochemistry	
BBMB 4040	Biochemistry I	
6 credits from approved program focus choice list		6
Interdisciplinary IHS Supporting Coursework*		9
Total Credits		35

*9 credits from approved lists for other program focus areas.

Program Focus in Data Science & Human Health

In addition to the 7 required credits for this specialization, students must complete 15 credits from the program focus choice list for Data Science and Human Health, and 9 credits of interdisciplinary supporting coursework from the other program focus areas. See the IHS website for a lists of courses for each program focus.

Required Courses

STAT 3201	Intermediate Statistical Concepts and Methods	4
Choose 1:		3-4
STAT 4279	Statistical Computing for Data Analysis	
DS 2020	Data Acquisition and Exploratory Data Analysis	
15 credits from approved program focus choice list		15
Interdisciplinary IHS Supporting Coursework*		9
Total Credits		31-32

*9 credits from approved lists for other program focus areas.

Program Focus in Public Policy, Ethics, Communication & Human Health

In addition to the 12 required credits for this specialization, students must complete 12 credits from the program focus choice list for Public Policy, Ethics, Communication & Human Health, and 9 credits of interdisciplinary supporting coursework from the other program focus areas. See the IHS website for a lists of courses for each program focus.

Required Courses

POLS 3350	Science, Technology, and Public Policy	3
ECON 1010	Principles of Microeconomics	3
Choose 1:		3
ENGL 3120	Communicating Science and Public Engagement	
JLMC 2600	Media Controversies in Science and Technology	
Choose 1:		3
ANTHR 3240	Health and Native American Communities	
HIST 4820	Birth, Death, Medicine, and Disease	
RELIG 3610X	Religion, Health, and Medicine	
12 credits from approved program focus choice list		12
Interdisciplinary IHS Supporting Coursework*		9
Total Credits		33

*9 credits from approved lists for other program focus areas.

Program Focus in Behavioral and Mental Health Studies

In addition to the 12 required credits for this specialization, students must select 12 credits from the program focus choice list for Behavioral and Mental Health Studies, and 9 credits of interdisciplinary supporting coursework from the other program focus areas. See the IHS website for a lists of courses for each program focus.

Required Courses

PSYCH 2300	Developmental Psychology	3
PSYCH 2800	Social Psychology	3
PSYCH 1010	Introduction to Psychology	3
or SOC 1340	Introduction to Sociology	
This program focus requires both PSYCH 1010 and SOC 1340; the course not chosen in the core must be taken in the focus.		
SOC 2760X	Sociology of Health and Illness	3
12 credits from approved program focus choice list		12
Interdisciplinary IHS Supporting Coursework*		9
Total Credits		33

*9 credits from approved lists for other program focus areas.

Program Focus in Science of Health and Disease

The program focus in Science of Health and Disease has two pathways:

Standard Path – for students interested in careers in the science-related roles in healthcare.

Pre-Health Path – for students interested in pursuing advanced health-related degrees in medical schools or research-based graduate programs.

Standard Path
